#### Past performance does not guarantee future results.

The Morningstar Rating™ for funds, or "star rating", is calculated for funds and separate accounts with at least a 3-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. Star rating based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance (without adjusting for any sales load, if applicable), placing more emphasis on downward variations and rewarding consistent performance. 5 stars are assigned to the top 10%, 4 stars to the next 22.5%, 3 stars to the next 35%, 2 stars to the next 22.5%, and 1 star to the bottom 10%. Overall Morningstar Rating is derived from a weighted average of the performance figures associated with its 3-, 5-, and 10-year (if applicable) Morningstar Rating metrics. #### Mutual Funds in Bold are Tier 1.

ETFs are not mutual funds. Unlike traditional open-ended mutual funds, ETF shares are bought and sold in the secondary market through a stockbroker. ETFs trade on major stock exchanges and their prices will fluctuate throughout the day. Both ETFs and mutual funds are subject to risk and volatility.

Within approximately the last year, the Fund has undergone changes which may have included the fund name, objective, principal investment strategy and/or benchmark. For more details, see the applicable Fund's prospectus.

Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. For more current performance information to the most recent month ended, please visit hartfordfunds.com.

Performance and expenses for other mutual fund share classes may vary. Indices are unmanaged and not available for direct investment.

ETF shares are bought and sold at market price, not net asset value (NAV). Total returns are calculated using the daily 4:00 p.m. Eastern Time NAV. Market price returns reflect the midpoint of the bid/ ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns an investor would receive if they traded shares at other times. Brokerage commissions apply and will reduce returns.

¹ Expenses are the total annual operating expenses from the Fund's most recent prospectus at the time of publication. For HDBFX: Gross expenses do not reflect contractual expense reimbursement arrangements. Net expenses reflect such arrangements in instances when they reduce gross expenses. These arrangements remain in effect until 2/28/26 unless the Fund's Board of Directors approves an earlier termination. Without these arrangements, performance would have been lower.

Current performance may be lower or higher than the performance data quoted. For more current performance information to the most recent month ended, please visit hartfordfunds.com.

<sup>&</sup>lt;sup>1</sup> Expenses are from the Fund's most recent prospectus at the time of publication. For HGXFX: Gross expenses do not reflect contractual expense reimbursement arrangements. Net expenses reflect such arrangements in instances when they reduce gross expenses. These arrangements remain in effect until 2/28/26 unless the Fund's Board of Directors approves an earlier termination. Without these arrangements, performance would have been lower.

#### **Important Risk Considerations**

Investing involves risk, including the possible loss of principal. Security prices fluctuate in value depending on general market and economic conditions and the prospects of individual companies. Fixed income security risks include credit, liquidity, call, duration, event, and interest-rate risk. As interest rates rise, bond prices generally fall. Investments in high-yield ("junk") bonds involve greater risk of price volatility, illiquidity, and default than higher-rated debt securities. Loans can be difficult to value and less liquid than other types of debt instruments; they are also subject to nonpayment, collateral, bankruptcy, default, extension, prepayment and insolvency risks. Derivatives are generally more volatile and sensitive to changes in market or economic conditions than other securities; their risks include currency, leverage, liquidity, index, pricing, regulatory and counterparty risk. Obligations of US Government agencies are supported by varying degrees of credit but are generally not backed by the full faith and credit of the US Government. Municipal securities may be adversely impacted by state/local, political, economic, or market conditions. Investors may be subject to the federal Alternative Minimum Tax as well as state and local income taxes. Capital gains, if any, are taxable.

Foreign investments may be more volatile and less liquid than US investments and are subject to the risk of currency fluctuations and adverse political, economic, and regulatory developments. These risks may be greater, and include additional risks, for investments in emerging markets or if a fund focuses in a particular geographic region or country.

• The securities of large market capitalization companies may underperform other segments of the market. • Small- and mid-cap securities can have greater risks and volatility than large-cap securities. • For dividend-paying stocks, dividends are not guaranteed and may decrease without notice. • To the extent a fund focuses on one or more sectors, the fund may be subject to increased volatility and risk of loss if adverse developments occur. • Financially material environmental, social and/or governance (ESG) characteristics are one of several factors that may be considered. The Fund may perform differently from funds that do not integrate ESG into their analysis. • A fund's impact investing focus may cause the Fund to forego certain investment opportunities and underperform funds that do not have a similar focus.

Diversification does not eliminate the risk of experiencing investment losses.

HTRB: Security prices of the Fund's underlying holdings will fluctuate in value depending on general market and economic conditions and the prospects of individual companies. The market price of the Fund's shares will fluctuate in response to changes in the Fund's net asset value, intraday value of the Fund's holdings, and the supply and demand for shares. • The Fund is actively managed and does not seek to replicate the performance of a specified index. • The Fund may effect creations and redemptions partly or wholly for cash, rather than in-kind, which may make the Fund less tax-efficient and incur more fees than an ETF that primarily or wholly effects creations and redemptions in-kind.
