

Hartford Total Return Bond ETF

Tickers HTRB

What Happened?

- Additional signs of economic weakness in the US prompted a greater-than-expected Federal Reserve (Fed) rate cut.
- Most global sovereign bond yields moved lower with the yield-curve steepening across developed markets.
- Short-dated bond yields declined notably as the Fed joined other central banks in cutting policy rates, kicking off what was expected to be a steady easing of monetary policy.

Performance Highlights

Contributors

- Our long-duration positioning helped relative performance as a result of the sharp decline in government-bond yields.
- Positioning in securitized credit sectors benefited relative returns, including commercial mortgage-backed security and asset-backed securities.

Detractors

- An underweight to investment-grade (IG) corporate bonds detracted from relative results as spreads tightened. Elevated yields could continue to bolster demand for credit but we're finding better opportunities in other sectors.
- Exposure to emerging-markets (EM) debt modestly detracted from relative performance.

Portfolio Managers from Wellington Management

Joseph F. Marvan, CFA
Senior Managing Director Fixed-Income Portfolio Manager
Professional Experience Since 1988

Campe Goodman, CFA
Senior Managing Director Fixed-Income Portfolio Manager
Professional Experience Since 1997

Robert D. Burn, CFA
Senior Managing Director Fixed-Income Portfolio Manager
Professional Experience Since 1998

Jeremy Forster
Managing Director Fixed-Income Portfolio Manager
Professional Experience Since 2004

Month End Performance (%) as of 9/30/24

Overall Morningstar Rating™*

546 Products | Intermediate Core-Plus Bond Category Based on Risk-Adjusted Returns as of 9/30/24

Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. For more current performance information to the most recent month ended, please visit hartfordfunds.com. Please see page 3 for standardized performance. Returns for less than one year are not annualized.

Credit spreads are the difference in yields between two fixed-income securities with the same maturity, but originating from different investment sectors.

Yield curve is a line that plots interest rates of bonds having equal credit quality but differing maturity dates; its slope is used to forecast the state of the economy and interest-rate changes.

Investment-grade securities are fixed-income securities that are rated at 'BBB' or higher by Standard & Poor's or Moody's.

Current Insight and Positioning From Wellington Management

- Corporate fundamentals marginally deteriorated from a very strong starting point; quality composition remains strong relative to history.
- We maintain an underweight to IG credit due to better observed opportunities in various out-of-benchmark sectors, including high-quality securitized credit (residential housing benefits from low supply and embedded home price appreciation), BB high yield (more insulated from default risk than CCCs), and select EMs (limit exposure to high conviction turnaround stories).
- We remain positioned slightly long duration vs. the benchmark with a bias for the yield curve to steepen.

¹Credit exposure is the credit ratings for the underlying securities of the Fund as provided by Standard and Poor's (S&P), Moody's Investors Service, or Fitch and typically range from AAA/Aaa (highest) to C/D (lowest). If S&P, Moody's, and Fitch assign different ratings, the median rating is used. If only two agencies assign ratings, the lower rating is used. Securities that are not rated by any of the three agencies are listed as "Not Rated." Ratings do not apply to the Fund itself or to Fund shares. Ratings may change.

ETF shares are bought and sold at market price, not net asset value (NAV). Total returns are calculated using the daily 4:00 p.m. Eastern Time NAV. Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns an investor would receive if they traded shares at other times. Brokerage commissions apply and will reduce returns.

Bloomberg US Aggregate Bond Index is composed of securities that cover the US investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities. Indices are unmanaged and not available for direct investment.

*Star Ratings: 3-year 3 stars out of 546 products, 5-year 3 stars out of 505 products for the period ended herein. Other share classes may have different ratings. The Morningstar Rating™ for funds, or "star rating", is calculated for funds and separate accounts with at least a 3-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. Star rating based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance (without adjusting for any sales load, if applicable), placing more emphasis on downward variations and rewarding consistent performance. 5 stars are assigned to the top 10%, 4 stars to the next 22.5%, 3 stars to the next 35%, 2 stars to the next 22.5%, and 1 star to the bottom 10%. Overall Morningstar Rating is derived from a weighted average of the performance figures associated with its 3-, 5-, and 10-year (if applicable) Morningstar Rating metrics. For more information about the Morningstar Fund Ratings, including their methodology, please go to global.morningstar.com/managerdisclosures. ©2024 Morningstar, Inc. All rights reserved. Important Risks: Investing involves risk, including the possible loss of principal. The net asset value (NAV) of the Fund's shares may fluctuate due to changes in the market value of the Fund's holdings which may in-turn fluctuate due to market and economic conditions. The Fund's share price may fluctuate due to changes in the relative supply of and demand for the shares on an exchange. The Fund is actively managed and does not seek to replicate the performance of a specified index. The Fund may allocate a portion of its assets to specialist portfolio managers, which may not work as intended. • Fixed income security risks include credit, liquidity, call, duration, event, and interest-rate risk. As interest rates rise, bond prices generally fall. • The risks associated with mortgage-related and asset-backed securities as well as collateralized loan obligations (CLOs) include credit, interest-rate, prepayment, liquidity, default and extension risk. • The purchase of securities in the To-Be-Announced (TBA) market can result in higher portfolio turnover and related expenses as well as price and counterparty risk. • Derivatives are generally more volatile and sensitive to changes in market or economic conditions than other securities; their risks include currency, leverage, liquidity, index, pricing, regulatory, and counterparty risk. • Foreign investments may be more volatile and less liquid than U.S. investments and are subject to the risk of currency fluctuations and adverse political, economic and regulatory developments. These risks may be greater for investments in emerging markets. • Investments in high-yield ("junk") bonds involve greater risk of price volatility, illiquidity, and default than higher-rated debt securities. • Obligations of U.S. Government agencies are supported by varying degrees of credit but are generally not backed by the full faith and credit of the U.S. Government. • Restricted securities may be more difficult to sell and price than other securities. • The Fund may have high portfolio turnover, which could increase its transaction costs and an investor's tax liability. • In certain instances, unlike other ETFs, the Fund may effect creations and redemptions partly or wholly for cash, rather than in-kind, which may make the Fund less tax-efficient and incur more fees than an ETF that primarily or wholly effects creations and redemptions in-kind.

Investors should carefully consider a fund's investment objectives, risks, charges and expenses. This and other important information is contained in a fund's full prospectus and summary prospectus, which can be obtained by visiting hartfordfunds.com. Please read it carefully before investing.
