[†]Credit exposure is the credit ratings for the underlying securities of the Fund as provided by Standard and Poor's (S&P), Moody's Investors Service, or Fitch and typically range from AAA/Aaa (highest) to C/D (lowest). If S&P, Moody's, and Fitch assign different ratings, the median rating is used. If only two agencies assign ratings, the lower rating is used. Securities that are not rated by any of the three agencies are listed as "Not Rated." Ratings do not apply to the Fund itself or to Fund shares. Ratings may change.

Important Risks: Investing involves risk, including the possible loss of principal. Security prices fluctuate in value depending on general market and economic conditions and the prospects of individual companies. • Fixed income security risks include credit, liquidity, call, duration, and interest-rate risk. As interest rates rise, bond prices generally fall. • Obligations of U.S. Government agencies are supported by varying degrees of credit but are generally not backed by the full faith and credit of the U.S. Government. • Mortgage-related and asset-backed securities' risks include credit, interest-rate, prepayment, and extension risk. • Municipal securities may be adversely impacted by state/local, political, economic, or market conditions; these risks may be magnified if the Fund focuses its assets in municipal securities of issuers in a few select states. • Applying sustainability criteria to the investment process may result in foregoing certain investments and underperformance comparative to funds that do not have a similar focus. There is a risk that the securities identified by the sub-adviser as meeting its sustainable investing criteria do not operate as anticipated. • Derivatives are generally more volatile and sensitive to changes in market or economic conditions than other securities; their risks include currency, leverage, liquidity, index, pricing, regulatory and counterparty risk. • The Fund may have high portfolio turnover, which could increase its transaction costs and an investor's tax liability. • The value of inflation-protected securities (IPS) generally fluctuates with changes in real interest rates, and the market for IPS may be less developed or liquid, and more volatile, than other securities markets. • Investments in high-yield ("junk") bonds involve greater risk of price volatility, illiquidity, and default than higher-rated debt securities. • The purchase of securities in the To-Be-Announced (TBA) market can result in higher portfolio turnover and related expenses as well as price and counterparty risk. • Loans can be difficult to value and less liquid than other types of debt instruments; they are also subject to nonpayment, collateral, bankruptcy, default, extension, prepayment and insolvency risks. • Foreign investments may be more volatile and less liquid than U.S. investments and are subject to the risk of currency fluctuations and adverse political, economic and regulatory developments. • Changes related to LIBOR could have an adverse impact on financial instruments that reference this rate.

Effective Duration measures the sensitivity of an asset or portfolio's price to nominal interest rate movement. **30-Day SEC Yield** reflects the hypothetical net current income earned, after the deduction of a fund's expenses, during a 30-day period, expressed as an annual percentage rate based on the fund's share price at the end of the period. Actual income distributions will usually differ. **Unsubsidized 30-Day SEC Yield** is the Fund's 30-Day SEC yield without the impact of fee/expense waivers.
