Important Risks: Investing involves risk, including the possible loss of principal. Security prices fluctuate in value depending on general market and economic conditions and the prospects of individual companies. • The Fund invests in China A shares through Stock Connect, which is subject to a number of restrictions that may affect the Fund's investments and returns. • Risks associated with investments in China include currency fluctuation, political, economic, social, environmental, regulatory and other risks, including risks associated with differing legal standards. Concentrating investments in China subjects the Fund to more volatility and greater risk of loss than a more diversified fund. • Foreign investments may be more volatile and less liquid than U.S. investments and are subject to the risk of currency fluctuations and adverse political and economic developments. These risks may be greater for investments in emerging markets. • Small-cap and mid-cap securities can have greater risks and volatility than large-cap securities. • Derivatives are generally more volatile and sensitive to changes in market or economic conditions than other securities; their risks include currency, leverage, liquidity, index, pricing, and counterparty risk.

Asset Weighted Market Cap is the value of a corporation as determined by the number of outstanding shares of common stock multiplied by the price per share. **Price/Book** is the ratio of a stock's price to its book value per share. **Price/Earnings** is the ratio of a stock's price to its earnings per share. **Return on Equity** is the average amount of net income returned as a percentage of shareholder's equity over the past five years.
