

## Seeking International Growth With Lower Volatility

### RODM

Provides deep and diverse exposure across international developed markets and economies.

#### ETF That Seeks Outperformance

RODM is a research-driven, rules-based strategy that differs from traditional passive funds because it has the flexibility to go beyond benchmark weights and exposures, avoiding concentration in mega-cap, multinational companies.

#### Smart Exposure for Growth

Using a comprehensive approach, RODM focuses on developed international equities that meet specific characteristics—high-quality, attractively priced, recognized by the market—which can potentially enhance returns.

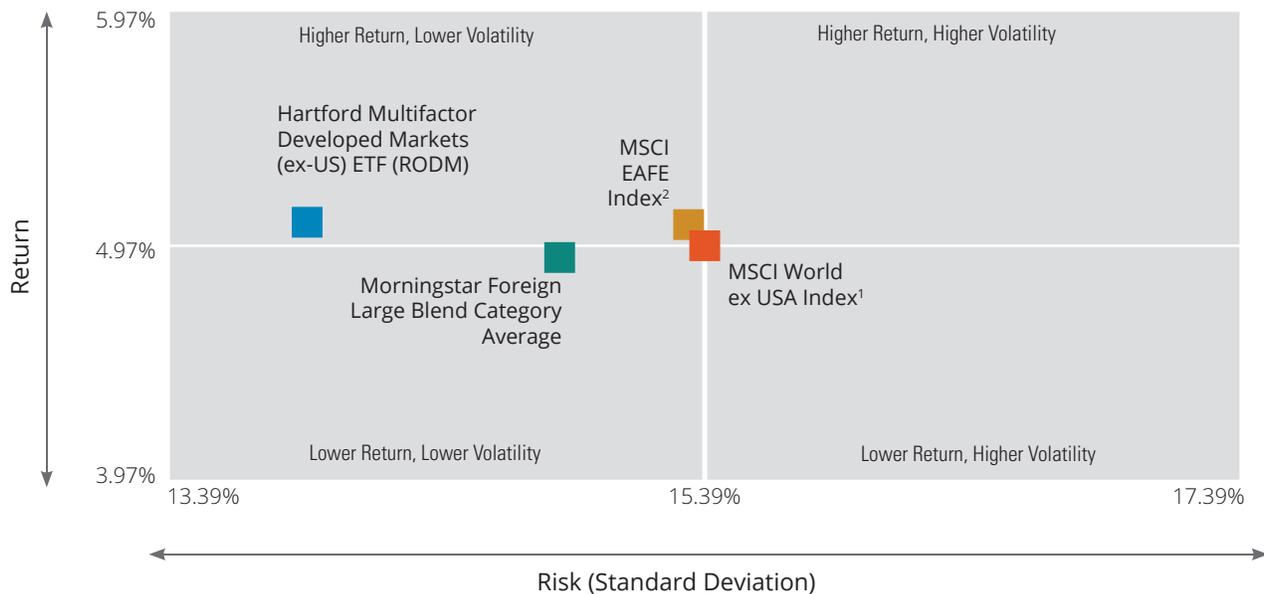

#### Lower Volatility

The Fund strives for broad diversification across international countries and economies, all while targeting 15% less volatility. The process has resulted in strong performance with less risk.

15% Volatility Reduction Target\*

### Historical Outperformance With Lower Relative Risk

Risk/Return Comparison (3/1/15-12/31/20)

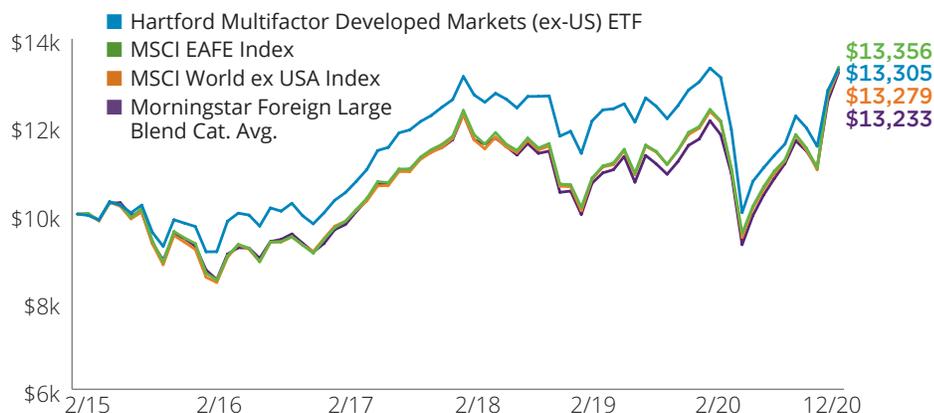

Fund Objective: Seeks to provide investment results that, before fees and expenses, correspond to the total return performance of an index that tracks the performance of companies located in major developed markets of Europe, Canada, and the Pacific Region

\*The strategy seeks to achieve a volatility reduction target up to the amount noted over a complete market cycle relative to a market-cap weighted index. There is no guarantee that a fund will achieve its investment objective. Source: Hartford Funds.

**Standard deviation** is a statistical measure of risk that indicates the historical volatility of an investment's returns.

Past performance does not guarantee future results. The performance shown above is index performance. Indices are unmanaged and not available for direct investment.

**Growth of a \$10,000 Investment (2/25/15-12/31/20)**

**Performance (%) (SI=Since ETF Inception of 2/25/15)**

As of 12/31/20	YTD	Average Annual Total Returns			
		1 Year	3 Year	5 Year	Since Inception
<b>Hartford Multifactor Developed Markets (ex-US) ETF</b>

Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. For more current performance information to the most recent month ended, please visit [hartfordfunds.com](http://hartfordfunds.com).

ETF Shares are bought and sold at market price, not net asset value (NAV), and are not individually redeemed from the Fund. Total returns are calculated using the daily 4:00 p.m. Eastern Time NAV. Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns an investor would receive if they traded shares at other times. Brokerage commissions apply and will reduce returns.

Important Risks: Investing involves risk, including the possible loss of principal. Security prices fluctuate in value depending on general market and economic conditions and the prospects of individual companies. • The Fund is not actively managed but rather attempts to track the performance of an index. The Fund's returns may diverge from that of the index. • Foreign investments may be more volatile and less liquid than U.S. investments and are subject to the risk of currency fluctuations and adverse regulatory, political and economic developments. These risks may be greater in particular geographic regions or countries. • Investments focused in a country, region, sector, industry or group of industries may increase volatility and risk. • Mid-cap securities can have greater risks and volatility than large-cap securities.
