Designed for Results

The Hartford Balanced Income Fund is a simple strategy designed to offer the growth potential investors need without taking excessive risk.

Invests in a Mix of Stocks and Bonds

The Fund targets a balanced allocation of 55% bonds and 45% stocks, with fluctuations of no more than +/- 5%. The bonds can provide income and help reduce volatility, while the stocks can provide growth potential.

Companies You Know and Trust

Dividend-paying stocks and investment-grade corporate bonds provide investments that you can feel confident investing in for the long run. A small, flexible allocation to high-yield bonds and emerging market debt helps enhance returns and income.

Strong Performance With Lower Volatility

Over the last ten years, the Fund has provided an average annual return of 8.96% and has beaten 97% of its peers¹—while experiencing only half the volatility of the S&P 500 Index.*

*Beta is a measure of volatility relative to a benchmark. The benchmark has a beta of 1.0, so if the beta of an investment is 1.1, this means it has historically been 10% more volatile than the benchmark and a beta 0.90 would mean the investment has historically been 10% less volatile than the benchmark. Over the last ten years (10/1/08 - 9/30/18), the Fund has experienced a beta of 0.49 compared to the S&P 500 Index.

Important Risks: Investing involves risk, including the possible loss of principal. • The Fund seeks to achieve its investment objective by allocating assets among different asset classes and/or specialist portfolio managers. There is no guarantee a fund will achieve its stated objective. Security prices fluctuate in value depending on general market and economic conditions and the prospects of individual companies. • Fixed income security risks include credit, liquidity, call, duration, and interest-rate risk. As interest rates rise, bond prices generally fall. • For dividend-paying stocks, dividends are not guaranteed and may decrease without notice. • Foreign investments may be more volatile and less liquid than U.S. investments and are subject to the risk of currency fluctuations and adverse political and economic developments. • Different investment styles may go in and out favor, which may cause a fund to underperform the broader stock market.
