Building Better Diversification

Investors concerned about market volatility may benefit by incorporating a conservative global fixed-income approach into their portfolios.

A Globally Diverse Portfolio

There are many attractive, high-quality fixed-income investments beyond the US. Hartford World Bond Fund invests primarily in conservative global government bonds, while also seeking other opportunistic sources of return.

Stronger Returns in Historically Volatile Markets

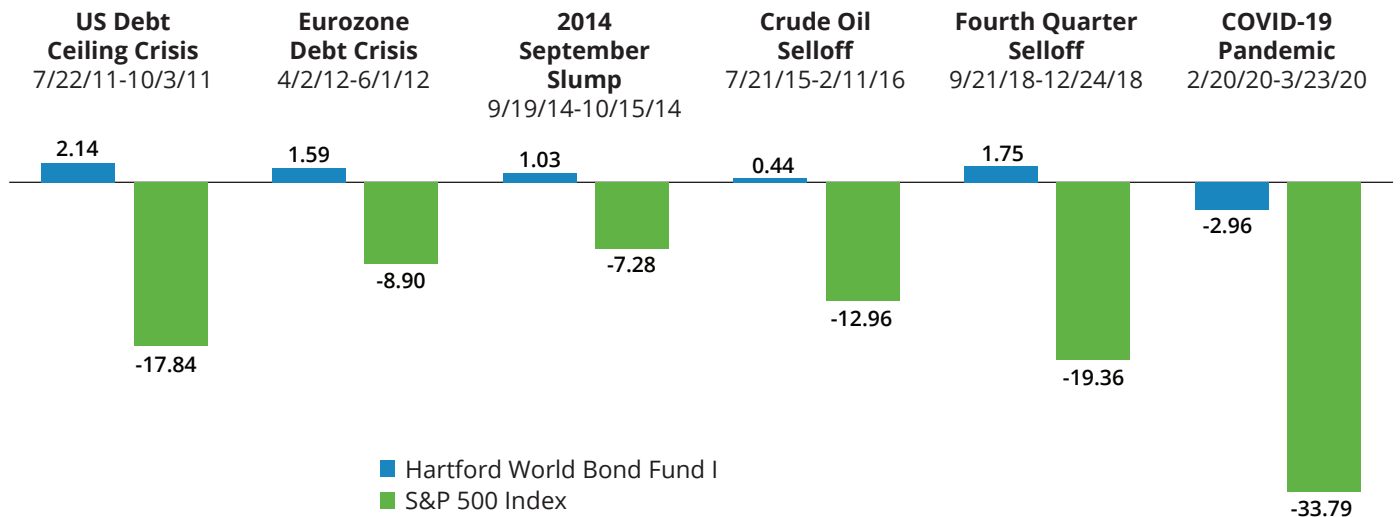

Investments that can help dampen market volatility play a crucial role in investor portfolios. The Fund has historically provided positive returns during most volatile equity markets as illustrated below.

Trusted Fixed-Income Expertise

The Fund is sub-advised by Wellington Management, an asset manager with more than \$550 billion in fixed-income assets worldwide (as of 12/31/20).* They have also managed global bond portfolios for nearly 25 years.

Historically Attractive Performance During Turbulent Equity Markets

Performance During S&P 500 Index¹ Drawdowns (%)

Source: Morningstar, 10/20. S&P 500 Index drawdowns are measured from peak to trough since 5/31/11, the inception date of Hartford World Bond Fund.

Past performance does not guarantee future results. The performance shown above is index performance. Indices are unmanaged and not available for direct investment.

* Wellington Management refers to Wellington Management Company LLP and its affiliates. Firm assets include assets under management and non-discretionary assets.

Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. For more current performance information to the most recent month ended, please see hartfordfunds.com.

Important Risks: Investing involves risk, including the possible loss of principal. Security prices fluctuate in value depending on general market and economic conditions and the prospects of individual companies. The Fund may allocate a portion of its assets to specialist portfolio managers, which may not work as intended. • Fixed income security risks include credit, liquidity, call, duration, and interest-rate risk. As interest rates rise, bond prices generally fall. • Foreign investments may be more volatile and less liquid than U.S. investments and are subject to the risk of currency fluctuations and adverse political and economic developments. These risks may be greater for investments in emerging markets or if the Fund focuses in a particular geographic region or country. • Investments in high-yield ("junk") bonds involve greater risk of price volatility, illiquidity, and default than higher-rated debt securities. • Mortgage-related and asset-backed securities' risks include credit, interest-rate, prepayment, and extension risk. • Derivatives are generally more volatile and sensitive to changes in market or economic conditions than other securities; their risks include currency, leverage, liquidity, index, pricing, and counterparty risk. • The Fund may invest in a smaller number of issuers, so it may be more exposed to risks and volatility than a more broadly diversified fund. • Restricted securities may be more difficult to sell and price than other securities. • Obligations of U.S. Government agencies are supported by varying degrees of credit but are generally not backed by the full faith and credit of the U.S. Government.

¹ S&P 500 Index is a market capitalization-weighted price index composed of 500 widely held common stocks.

² FTSE World Government Bond Index is a market-capitalization-weighted index consisting of government bond markets. Country eligibility is determined based on market capitalization and investability criteria. All issues have a remaining maturity of at least one year.

³ Expenses as shown in the Fund's most recent prospectus.
