

Premium/Discount Range Report

01/01/2024 to 03/31/2025

The tables below provide information about the size and frequency of differences between the per share net asset value ("NAV") of each fund and its market price. NAV is the price at which each fund issues and redeems shares. It is calculated at the end of each trading day (normally 4:00 p.m. EST). Market price is the official closing price of an ETF share. "Premium" generally describes when a fund's market price exceeds its NAV. "Discount" generally describes when a fund's market price is below its NAV. With exchange-traded funds, the market price of each fund's shares is typically slightly higher or lower than its per share NAV. Many factors may contribute to a fund's premium or discount, including the supply and demand for the fund shares, investors' assessments of the underlying value of a fund's portfolio securities, differences between the closing times of the U.S. and non-U.S. markets, and developments after markets close. Note that the premium/discount range of "Between 0.5% and -0.5%" includes the days that the fund's market price equaled its NAV, so there was no premium or discount on these days.
