

10-Year Fixed Income Spread Analysis (bps) as of 10/31/2018

10-Year Treasury Yield: 3.16%

ICE London Interbank Offered Rate:¹ 2.56%

The spread to Treasury in the charts below is defined as the difference in yield between the 10-year U.S. Treasury and the yield of the representative asset-class index. Yield spreads are a common way to compare the overall value of one bond to another. When spreads tighten (decrease) in a particular asset class, there is generally less potential reward in those bonds. Spreads are measured in basis points (bps). A basis point is equal to 1/100 of a percentage point.

This report may be helpful in identifying opportunities across the fixed-income markets.

The indication of a fixed-income sector being potentially overvalued or undervalued is based solely upon the sector's current yield relative to its historical average. Wellington Management and Schroder Investment Management, Hartford Funds' sub-advisers, employ their own disciplined research and investment process to determine whether a sector is undervalued or overvalued and whether to buy or sell securities for the funds. The analysis included above does not necessarily reflect the sub-advisers' current views on the fixed-income sectors shown.

See back page for representative index definitions.

IMPORTANT INFORMATION

All investments are subject to risk, including the possible loss of principal. Fixed income security risks include credit, liquidity, call, duration, and interest-rate risk. As interest rates rise, bond prices generally fall. • Investments in high-yield ("junk") bonds involve greater risk of price volatility, illiquidity, and default than higher-rated debt securities.
