

Inflation and Volatility: The Risks of Being Wary

Anxious investors could miss out when trying to avoid turbulent markets.

The last time inflation was 10% was in February of 1979. Back then, a suffering economy and a volatile market added to investors' anxiety. This graph illustrates five choices an equity investor could've made at that time. While the seemingly "safer" investment choices of bonds, cash, or gold may have provided temporary relief, they fell behind equity and balanced investors over the long term.

Five Reactions to 10% Inflation in 1979

Bloomberg US Aggregate Bond Index is comprised of government securities, mortgage-backed securities, asset-backed securities, and corporate securities to simulate the universe of bonds in the market.

IA SBBI US 30 Day TBill The index measures the performance of a single issue of outstanding Treasury Bill which matures closest to, but not beyond, one month from the rebalancing date. The issue is purchased at the beginning of the month and held for a full month; at the end of the month that issue is sold and rolled into a newly selected issue. The index is calculated by Morningstar and the raw data is from WSJ.

S&P 500 Index is a market capitalization-weighted price index composed of 500 widely held common stocks.

S&P GSCI Gold Index is a sub-index of the S&P GSCI, provides investors with a reliable and publicly available benchmark tracking the COMEX gold future.
